

INTEGRATED CONTROLS

WORKING TOGETHER FOR IMPROVED EFFICIENCY

Integrated Control Systems unify the disparate technologies in buildings so they can communicate and work together intelligently. This lowers costs and boosts efficiencies.

The unique distributed architecture enables the multi-tasking that's essential for a complete building control solution. Multiple programs can operate independently and simultaneously, and rapidly communicate with each other.

A DEDICATED TEAM FOR A COMPLETE INTEGRATED CONTROLS SOLUTION

KODUM is the only Integrator in our market with a dedicated ATS [Advanced Technical Services] division. This means we can bring together a team of professionals and developers from a range of platforms and disciplines to design, develop, program, deliver, commission and support integrated advanced technology systems.

QUALITY PARTNERSHIPS DELIVER OUTSTANDING RESULTS

Following our 'one team' ethos, it makes sense that we partner with the best. We work closely with leading brands and their global networks to bring the very best skillsets to your project to ensure it's a success and a joy to use.
