

SMART ENVIRONMENTS

SMART SYSTEMS FOR ENERGY EFFICIENT SPACES

The future of building spaces is all about energy efficiency. Smart Buildings not only improve our environmental impact – it benefits the wellbeing of those who live and work in them.

An Intelligent Environment responds intuitively. It adapts the space immediately around you to create the right environment for your needs, while managing the efficient use of energy for the entire building.

At KODUM, we have the skills to design, install and manage energy management systems for your Smart Building. Our real-time scalable solutions enable you to take control of passive energy such as the sun for thermal management through to HVAC, Audio Visual, Lighting, Access Control, Security, CCTV monitoring and more.

BUILDING SMART ENERGY MANAGEMENT SYSTEMS

Building Management Systems (BMS) are more of an IT solution than the heating and ventilation control systems of days gone by. We can show you how to utilise new energy management technologies to create a more energy efficient environment that works for you, and your planet.

QUALITY PARTNERSHIPS DELIVER OUTSTANDING RESULTS

At KODUM we understand the barriers that building developers and clients face when it comes to creating real-time, energy management systems for their smart buildings. At KODUM, we work closely with great companies to research, develop and customise dependable platforms for energy efficient buildings.
